Power Hacksaws

POWER HACKSAW BLADES

3809 Sandflex - A flexible, tough power hacksaw blade of bi-metal material, with a toothed strip of high speed steel and a backing strip of spring steel, built up in the same way as our hand hacksaw blades. Carefully hardened, with precision-milled and precision-set teeth. The Sandflex bi-metal blade can withstand higher feed pressures, cutting speeds and blade tension than conventional power hacksaw blades, without the risk of blade failure. This ensures high performance in all power hacksawing of homogeneous materials, and also of rolled sections and tubular work-pieces. Sandflex can easily be recognised by its blue/orange colour coding. Available from stock with both conventional hole locations and with displaced holes for Kasto power hacksaws.

3840 SANDFLEX HST (5 blades per pack)

The Sandflex Heavy standard (HST) bi-metal blades are manufactured with precision ground teeth.

The HST series has extra thick blades with a wider body that makes it more rigid and has a higher resistance to fracturing and bending, allowing straighter cuts. Designed for extreme metal cutting. Slope shaped for various types of cuts.

Jigsaw Blades

JIGSAW BLADES

Bi-metal - Euro Shank

These blades fit: AEG, Atlas Copco, Bosch, DeWalt, Hitachi, Makita, Metabo, Milwaukee and similar machines. A new progressive toothting has been introduced on our 91-4PWM-5P blade. With fine toothting near the top of the shank, good when cutting in thin material, progressively becoming coarser further down the shank for effective cutting of thicker material. The design allows the blade to work well in most work situation.

-5P = 5 blades packed on card.

-1P = 1 blade packed on card.

BM Blade - Bi-metal combines the cutting performance of HSS with the flexibility of carbon steel. The saw blades are shatterproof and suitable for cutting through all types of material.

Please Note:

Please Note:

Bandsaw blade loops are made to the nearest millimetre possible and the price calculated accordingly.

Added to the meterage calculation is a \$18.10 welding charge.

e.g. a blade 3505 mm in length made from the material 3851-27-0.9-6/10 would be calculated

at 3.505 metres x \$37.60 per metre = \$131.78 + \$18.10 weld = \$149.88 list price.

3850 - SANDFLEX® DRAGON™

For easy-to-cut steels.

Multi purpose tooth shapes for a variety of applications.

Matrix HSS edge provides tough, impact-resistant teeth which are well suited for cutting thin walled tubes.

3851 - SANDFLEX® COBRA™

For high productivity cutting of workpieces.

Specially designed tooth shapes for maximum cutting performance. M 42 tooth tips offer heat and wear resistance for long blade life. Excellent choice for stainless steels.

3853 - SANDFLEX® FABRICATOR™

For bundle cutting of tubes and structural steel.

Special set prevents blade from binding in the cut. Tough Matrix tooth material provides superior shock resistance. 5/8 TPI for thin walled and single workpieces, as well as bundles. Special tooth shape for extra toughness. Gives fast, straight cuts with low feed forces. Well suited for mitre (angle) cutting.

3854 - SANDFLEX® KING COBRA™

For large, difficult-to-cut materials.

Special HSS tooth tips withstand high cutting temperatures. Special tooth shape with high penetration capability. For cutting large section of difficult-to-cut alloys.

3857 - SANDFLEX® EASY-CUT

General purpose bandsaw blade

Our patented revolutionary tooth design enables Easy-Cut to cut a whole variety of materials, including: Mild steel, Stainless Steel and Tool Steel. Also non-ferrous materials, including: aluminium, copper, brass and even plastics. But Easy-Cut's strength is not just in its versatility, the new tooth design means it is strong and resistant to tooth stripping. M42 tooth tips give good heat resistance and ensure maximum performance.

3868 - CARBIDE TRIPLE SET "XTRA"

A high production cutting carbide tipped bandsaw blade for the medium to large and difficult abrasive materials such as stainless steel, titanium alloys and abrasive tool steels. Triple set tooth design with good kerf clearance which will eliminate tooth loss. Selected carbide tip for wear, resistance and durability. Standard widths and thickness which fit all types of bandsaw machines without modification. Strong set pattern for good swarf clearance and longer tool life.

3869 - CARBIDE TRIPLE SET

Foundry bandsaw blade for non-ferrous and abrasive materials.

Carbide tipped teeth with triple set configuration. Fast cutting. Easy feeding. Straight and radius cutting. Special design for foundry use.

Warranty

1. Where permitted by law, all hand tools in the catalogue are offered with a lifetime warranty - a warranty against material and manufacturing defects for the normal lifetime of the tool in question. 'Lifetime' is defined as the period of time a tool can be expected to last under normal use and conditions.
2. SNA Europe's range of power tools, pneumatic tools, torque and hydraulic tools are excluded from point 1 and each has a separate warranty card supplied with the product covering the specific warranty conditions. Products are designed and manufactured for professional use. Generally the warranty period is one year (12 months) for professional use and two years (24 months) for private use. The warranty period starts on the purchase date. This date may be verified with the invoice or any other document of equivalent legal validity.
3. Defective products will be repaired, replaced or substituted, SNA Europe does not cover transit costs for repaired, replaced or substituted products.
4. Any product that has been incorrectly used and/or maintained or that is worn from improper use or that has suffered unauthorized modifications is not covered by this warranty.
5. A warranty claim must be submitted within the warranty period. This requires the submission or shipment of the complete tool in question with verification of sale documentation, which must validate the purchase date and the product designation, to the retailer or distributor.
6. Replacement or repair of the product will be carried out as quickly as possible. At the reception of the replaced or repaired product the customer is asked to validate conformity. Replacements and repairs provided under the warranty do not lengthen or renew the warranty period for the tool.
